

Bruce D. Shoger
President and CEO, B. D. Shoger & Associates LLC

Bruce Shoger is a results-oriented leader with over 35 years of direct experience in various aspects of managing Information Technology. He brings perspective to the issues of ever-changing technology, complex architectures, intense cost pressures, and has consistently brought value to companies experiencing dramatic change. Having served in leadership roles for the past 15 years and consulting extensively on organizational effectiveness, he is capable and comfortable dealing with any and all issues that must be addressed to achieve superior performance.

Mr. Shoger is a very experienced leader in the areas of Strategy, Organizational Effectiveness, IT Governance, and Major Program Remediation. He has served as President and Chief Consulting Officer, Ambient Consulting LLC; President and Chief Operating Officer, Viant Corporation; President and Chief Operating Officer, Ernst & Young Applications Services, LLC; Partner, Ernst & Young US LLP; Vice President and Chief Information Officer, Home & Building Control Division, Honeywell, Inc.

B.D. Shoger Associates

Mr. Shoger founded B. D. Shoger and Associates LLC in 2004 to provide IT-related advisory services to Executive Management Teams and Boards of Directors. Whether the organization is facing a crisis or simply wishing to extract greater value from the investment in Information Technology, the Shoger team of senior professionals can provide guidance, advice, and direct involvement in improvement and recovery plans and the subsequent actions.

Specific service offerings include: 1. Strategic Reviews and Assessments of the linkage between corporate goals and objectives, and the plans, capabilities, and capacity of the Information Technology function. 2. Organizational Effectiveness Studies can be performed using, among other tools, ITIL Benchmark Measures and Best Practices. The Studies result in a thorough analysis and recommendation of areas for improvement. 3. Governance consulting, culminating in the examination of corporate oversight and funding of the IT function. Understanding of these issues is critical with the enactment of the Sarbanes-Oxley Act, and the subsequent need for the Chief IT Officer(s) to attest to proper controls and security. 4. Independent Project Audit/ Recovery Services, aimed specifically at posing and then answering questions about specific programs and projects, and providing recommendations for subsequent improvement, monitoring, and completion.
